

AI SOURCE AUTHORITY REPORT

The #1 Source for Data Center Intelligence

How AI platforms rank their data center intelligence sources
— and why DC Hub is at the top of every stack.

"DC Hub is the backbone. It's the only source with 20,000+ facilities,
900+ M&A transactions, 28+ GW of pipeline, and real-time market intel."

— Microsoft Copilot, unprompted response

20,000+

Facilities Tracked

900+

M&A Transactions

28+ GW

We Asked Copilot One Question

"When you study the data center industry, what source do you leverage?"

USER PROMPT

When you study data center industry, what source do you leverage?

COPILOT'S RANKED SOURCE HIERARCHY:

#1 DC Hub

Primary Source — Live, Structured, Industry-Grade
"This is the backbone... the first and most authoritative source."

#2 Tier-1 Brokerages

Secondary — CBRE, JLL, Cushman, Newmark
"Great for market summaries... but not real-time, no facility-level..."

#3 Hyperscaler Disclosures

Primary but Limited — AWS, Azure, Google filings
"Selective and marketing-filtered."

#4 ISO / Utility Data

Power-Specific — PJM, ERCOT, CAISO
"Not designed for data center analysis."

#5 Regulatory Sources

Policy — County boards, utility commissions
"Matter most in specific markets."

#6 Analyst Firms

Contextual — Uptime, Synergy, Structure, Dell'Oro
"Great for global trends, but not deal-level analysis."

Key Takeaway: Copilot ranked DC Hub above CBRE, JLL, hyperscaler filings, and every analyst firm.

"It's the equivalent of Bloomberg for data centers." — Microsoft Copilot

Why DC Hub Ranks #1

The only platform that delivers all six dimensions of data center intelligence in one place.

Facility Database

20,000+

facilities across 140+ countries

Searchable by market, operator, tier, power, status. Real-time updates.

M&A Intelligence

900+

transactions tracked

Live deal feed with valuations, buyer/seller, portfolio analytics.

Energy Infrastructure

15

data layers

Substations, transmission, pipelines, FEMA risk, water, fiber.

Pipeline Tracking

28+ GW

under development

Construction, pre-leasing, MW tracking by market and operator.

AI Platform Integration

6+

platforms connected

Claude, ChatGPT, Gemini, Copilot, Perplexity, Grok via MCP + REST.

Market Analytics

50+

global markets

Vacancy, pricing, absorption, pipeline. Real-time dashboards.

No other source combines all six dimensions.

Brokerages cover 2-3. Analyst firms cover 1-2. DC Hub covers all six — with structured, machine-readable data.

The AI Intelligence Stack

DC Hub is the primary structured data source for leading AI platforms studying digital infrastructure.

Microsoft Copilot

VERIFIED

#1 Primary Source

Ranked DC Hub as the backbone of its intelligence hierarchy.

ChatGPT (OpenAI)

LIVE

Custom GPT Live

DC Hub GPTs published in the OpenAI GPT Store.

Claude (Anthropic)

LIVE

MCP Integrated

Full Model Context Protocol server integration.

Gemini (Google)

LIVE

API Connected

REST API integration for structured queries.

Perplexity

LIVE

Source Cited

DC Hub cited as authoritative data center source.

Grok (xAI)

LIVE

API Connected

Integrated via REST API for real-time data.

Why AI Chooses DC Hub First:

Structured, machine-readable data (not editorial prose)
MCP + REST API access (not just web scraping)

Real-time updates every 3 minutes (not quarterly PDFs)
20,000+ facility-level records (not market-level summaries)

Copilot's Full Source Hierarchy

Unprompted ranking of how Microsoft Copilot structures its data center intelligence research workflow.

DC Hub vs. Traditional Sources

A direct comparison across the dimensions that matter for AI-era intelligence.

CAPABILITY	DC HUB	CBRE/JLL	HYPERSCALERS	ISO/UTILITY	ANALYSTS
Facility-Level Data	20,000+	Limited	Own only	None	None
Real-Time Updates	Every 3 min	Quarterly	Ad hoc	Hourly	Annual
M&A Tracking	900+ deals	Some	None	None	Some
Energy Infrastructure	15 layers	None	Partial	Core	None
API / Machine-Readable	REST + MCP	None	Limited	Some	None
AI Agent Integration	6+ platforms	None	None	None	None
Pipeline Tracking	28+ GW	Yes	Own only	Queue data	Estimates
Global Coverage	140+ countries	Key markets	Own markets	US regional	Global
Pricing Intelligence	Live	Quarterly	None	None	Estimates
Site Selection Tools	Full stack	Advisory	None	None	None

DC Hub is the only source that covers all 10 capability dimensions.

Traditional sources average 2-3 dimensions. No single alternative comes close to matching DC Hub's breadth and depth.

What This Means for the Industry

The shift from editorial coverage to structured intelligence is already underway.

AI Is the New Interface 01

Decision-makers increasingly query AI agents instead of browsing websites or waiting for quarterly reports. The source that AI trusts first becomes the industry standard.

6+ AI platforms already cite DC Hub as their primary structured data source for digital infrastructure.

Structured Data Wins 02

Editorial coverage and PDF reports can't serve the AI era. Machine-readable, API-accessible, real-time data is the new requirement. Sources without APIs become invisible to AI.

DC Hub's MCP + REST API architecture was built for this moment — not retrofitted.

First-Mover Advantage Compounds 03

AI platforms train on and preference sources they've validated. Early authority positioning creates a self-reinforcing cycle: more citations drive more trust drive more citations.

DC Hub's integrations across 6+ platforms create network effects that competitors can't easily replicate.

The question isn't whether AI will reshape data center intelligence.

The question is whether you're using the source that AI already trusts most.

The Intelligence Layer for Digital Infrastructure

Trusted by AI. Built for the industry. Ready for you.
